

Home Church App

Staff walkthrough: a talk track for admins and group leaders/hosts

Presented ahead of the public release on the 25th. Roughly 60 to 75 minutes with questions.

How to read this script

Plain paragraphs are what you say out loud. Lines in italics and brackets are stage directions: what to put on the screen, what to tap, or a note for you as the presenter. Each part opens with who it is for, so you can trim the session if the room is only leaders or only admins.

Phrases in quotes, like "Open a room" or "Fetch Announcements", are the exact words on the buttons and switches in the app, so people can match what you say to what they see.

Agenda and running order

- **Part 1. Why this app exists** (5 min). Everyone.
- **Part 2. Getting in: accounts and the three roles** (5 min). Everyone.
- **Part 3. Getting around** (5 min). Everyone.
- **Part 4. The tour: what every member sees** (15 min). Everyone.
- **Part 5. For leaders and hosts: running a group night** (15 min). Leaders, hosts, admins.
- **Part 6. For admins: the dashboard** (20 min). Admins. Leaders are welcome to stay.
- **Part 7. Where the weekly content comes from** (3 min). Everyone.
- **Part 8. What to tell people about privacy** (3 min). Everyone.
- **Part 9. Before the 25th: what we need from you** (3 min). Everyone.
- **Part 10. Questions you will probably get** (Q and A).
- **Appendix A.** Who can do what, at a glance.
- **Appendix B.** Presenter checklist for the day of the walkthrough.

[If you are short on time, Parts 1 to 4 and Part 9 are the minimum for everyone. Run Part 5 and Part 6 as breakouts if the room splits naturally.]

Part 1. Why this app exists

Everyone. About 5 minutes.

[Open the app on the screen-mirrored phone. Let the greeting play: the house mark and "Welcome home."]

Thanks for being here. On the 25th, this app goes out to the whole church. Before it does, we want the people who will actually run it, the admins and the people who lead and host our groups, to have seen every part of it and to know which parts are theirs.

Here is the short version of what it is. It is Sunday, carried into the rest of the week. The sermon becomes a group guide within a day or two. The podcast episode, the songs we sang, the calendar, the announcements, the way into a group or a serve team, all of it lives in one place on people's phones.

And the part we are most excited about: most church apps are built for the person sitting in the seat. Very few are built for the person who has to run the living room on a Thursday night. This one is. A big chunk of today is about that.

Three things worth knowing up front:

- Everything you publish is live the moment you save it. There is no "publish" step, no update to wait for from the App Store. People see it the next time the app refreshes.
- The app works without signal. Guides, questions and anything already opened are kept on the phone, which matters in a building with concrete walls.
- There are no ads, no tracking, no analytics. We are not collecting data on our people. We will come back to what that means in Part 8.

Part 2. Getting in: accounts and the three roles

Everyone. About 5 minutes.

Signing in

[Tap the initials circle at the top right to open Your account. Show the Sign in section.]

Anyone can use almost all of the app without signing in. Nothing on Home, Listen, Guide, Cal or Connect is behind a login. But everybody in this room needs an account, because your role is attached to it.

Signing in is just an email address. Type it in, tap "Send me a code", and an eight-digit code arrives by email. Type it in and you are in. No password to remember or reset. The code is in the subject line, so on most phones you can read it straight off the notification, and iPhones will often offer to fill it in for you.

One honest warning: our sign-in emails are new, so the first few may land in junk or spam. If you do not see the code within a minute, check there, and please mark it "Not junk". Every person who does that helps the next person's code land in the inbox.

[On the very first launch, people who are not signed in also see two buttons under the greeting: "Log in with email" and "Continue as guest". Mention that guest is a real option and nothing is locked behind it.]

The three roles

Everyone in the app is one of three things.

- **Member.** The default. Everything a person in the congregation needs: guides, podcast, calendar, journal, joining a group room with a code.
- **Leader, also called host.** Everything a member has, plus the leader tools: presentation mode in every guide, and the ability to open and run a group room. In the app this is called Leader mode.
- **Admin.** Everything a leader has, plus the admin dashboard: announcements, the calendar, users, and the switches that change the app for everybody.

Two rules about roles. First, nobody sets their own. An admin turns Leader mode on for a person, and an admin promotes someone to admin. Second, there is no Leader mode switch in your own settings, so if you are a leader and do not see the leader tools, it is not something you did wrong. It means an admin has not turned it on for your account yet.

[Leaders: this is why we need you to sign in before the 25th. You cannot be given Leader mode until you have an account for an admin to find.]

A role change reaches your phone the next time you sign in or the app refreshes your session, usually within moments. If it does not appear, close the app fully and reopen it.

Part 3. Getting around

Everyone. About 5 minutes.

[Go back to Home. Point to the round menu button.]

The main screens are Home, Cal, Connect, Listen and Guide. Tap the menu button and you get a full-screen list of everything: those five, and below them the extra sections, which are Journal, Worship, Services, Practices, Alpha and Give. When the church is running group rooms, Group is at the front of that list too. Admins also see Admin, and everyone sees Your account at the end.

If you prefer a classic tab bar along the bottom, go to Your account, then Display, and turn off "Menu button". It switches instantly and you can turn it back any time.

Four gestures worth teaching people

- **Swipe sideways** to move between the main screens and on into the extra sections, in order. Home, Cal, Connect, Listen, Guide, then Journal, Worship and so on.
- **Pull down from the top** of any screen to refresh everything. If an announcement went up four minutes ago and someone does not see it, this is the answer. The app also refreshes itself every time it opens.
- **Search**, the magnifying glass at the top, looks through the whole app: every sermon, every guide and every question in it, events, groups, serve teams, the songs, and your own journal. It all happens on the phone.
- **Tap a Bible reference** almost anywhere and the verses slide up over what you are reading, without leaving the app.

The sun or moon at the top switches light and dark. Text size is under Your account, Display. There is also a "Hints" switch there: hints are the small pointers the app shows people the first time, and they can be turned off in one place.

Part 4. The tour: what every member sees

Everyone. About 15 minutes.

[Walk the screens in this order. Keep it brisk; the point is that staff can answer "where do I find..." questions from members.]

Home

Home is the front door. From the top: if the church has something urgent, a pinned banner sits right at the top. Then the greeting, with your first name if you have given it. Then the featured video, when there is one, which plays on mute until you tap the sound button in its corner.

Then Announcements. Tap any card to open its full page, with all its pictures, video and links. The little box icon in the corner of a card archives it on your phone only. Nobody loses anything: "Announcement Archive" under the last card is where it goes, and people can restore it from there.

Below that: Socials, which is the latest from our Instagram and links to our accounts. Service times, with a Directions button. Latest sermon, which opens this week's guide. The reading plan, when one is running alongside a series. And Give.

Cal

Cal is the church calendar. A month at the top; any day with a dot has something on it, and tapping it shows that day's events underneath. Below the month is everything upcoming.

Every event has "Add to calendar", which drops it into whatever calendar app the person uses. On the phone app it also has "Get notified", which sets a reminder on the phone itself: the day before at the event's time by default, or that morning, or an hour before, or any time they choose. If we move the event, the reminder moves with it. If we cancel it, the reminder is cancelled.

Connect

Connect is how people find their people. At the top is "Get in touch", a short form that emails the church office directly, and it only says "sent" once the email has actually gone. Then our recent Instagram posts.

Then Home groups. When groups are open, people can browse groups by day and neighborhood. Between seasons, the box says so and points to how to get involved next time. Then Serve teams, each with what it involves and how to sign up, and Next steps, including "I want to host a group".

Sign-ups go to the systems we already run, Church Center and the rest. The app does not keep a second copy of anybody's registration, so there is nothing new for the office to check.

Listen

Listen is the podcast. The latest sermon at the top, then every series we have preached, then the full archive. Each message opens to its notes and a button to listen on Spotify. If a message has a group guide, there is a link straight into it.

You may notice "(Working Title)" after a sermon name early in the week. That is on purpose. The guide is written before the episode posts and before the final title is set, so the app is honest that it is provisional. Once the episode is published, the real title replaces it everywhere at once.

Likewise, "Audio coming soon!" means the guide is up and the episode has not posted yet.

Guide

[Open this week's guide. Slow down here; this is the heart of the app.]

Guides are the point of this app. Every Sunday's message becomes a guide for groups and for anyone reading on their own. Every guide has the same six sections in the same order, so people always know where they are:

- **Overview**, the short version.
- **Sermon Summary**, the full walk-through of the message.
- **Discussion Questions**, for the group, grouped under headings.
- **Self-Reflection Questions**, to answer on your own. Answers save to your Journal.
- **Impactful One-Liners**, the lines worth remembering, each one shareable.
- **Scripture Index**, every passage referenced. Tap one to read it.

At the top: "Listen to Sermon" once the episode is up, and "Download guide", which makes a PDF to print or send.

Try this with them: press and hold to select a sentence anywhere in the guide. You get "Note this" and "Highlight". The highlight stays in the guide, and the note goes to your Journal with the quote attached.

Journal

Journal holds everything a person writes: notes from highlights, self-reflection answers, blank-page entries, and, after a group night, their own half of the conversation. It is organised by guide. "Save a copy of everything" exports the whole thing as one document.

Two things to be able to say confidently. Nobody else can see a journal: not other members, not leaders, not admins. There is no screen anywhere for that. When someone is signed in, the journal is backed up to their account so it follows them to a new phone. And on the phone app there is "Lock the Journal" under Your account, which asks for Face ID, Touch ID or the passcode before the Journal opens.

The rest of the menu

- **Worship**: Sunday's setlist, each song with album art and links to YouTube, Spotify, Apple Music, and lyrics. Swipe for earlier Sundays.
- **Services**: service times, the address with a "Get directions" button, and a few photos. The page someone new opens first.

- **Practices:** nine practices of Jesus, from Practicing the Way, with their videos playing inside the app.
- **Alpha:** what Alpha is and a way to register. When Alpha is between runs, the button is replaced by a note saying when to look for the next one.
- **Give:** one button that opens Overflow in the phone's browser. There is no payment inside the app.

Your account

Under the initials circle: sign in and out, your name, notifications, display settings, help and contact, privacy and terms, and "Your data", which is where a person can delete their account and everything on the phone themselves.

Notifications are three switches for everybody: "A new guide is posted", "Sunday reminder" and "Announcements". When the app is first opened it asks permission and, on a yes, turns them all on. One thing to know: truly urgent news, like a change to Sunday, reaches every phone that allows Home Church notifications, regardless of these switches.

Part 5. For leaders and hosts: running a group night

Leaders, hosts and admins. About 15 minutes.

[Before this part, confirm Group mode is on (Admin, App settings, The Group tab) and have a second phone signed in as a regular member, so you can show both sides of a room.]

What changes when you are a leader

Once an admin turns on Leader mode for you, two things appear. First, every guide gets a "Start presentation mode" button at the top. Second, the Group screen gives you "Host tonight", which is how you open a room.

Presentation mode

Presentation mode shows one discussion question at a time, in large type, readable across a living room or on a TV. Arrows move between questions, it tells you "3 of 12", and "Covered this one" lets you tick off what you got to. "Leave presentation mode" takes you back to the guide.

Use it whether or not you open a room. It is the simplest way to lead from the guide.

Group rooms: the big idea

A group room is a private space for one night. You open it, the app gives you a six-digit code, your group types the code into the Group screen, and everybody is looking at the same questions on their own phone.

The key design choice: when someone answers a question, nobody sees it, not even you, until you open it. You choose when an answer goes up for the room. That means quieter people can write without being steamrolled, and nobody reads ahead.

Opening a room

[On the leader phone: menu, Group. Show "Host tonight".]

Under "Host tonight" is this week's guide. If your group is running a week behind, swipe sideways for an earlier Sunday. Tap "Open a room" on the guide you want.

The guide's discussion questions come into the room. Inside the room you can reword any question, remove one, or add your own with "Add for everyone". Edits only change your room. The published guide stays exactly as it is.

The code sits at the top of the room. Read it out, or tap "Text it to your group" to send it. A code is good for one night.

During the night

[On the member phone: Group, type the code, "Join the room". Post an answer to one question.]

Members tap a question, write their answer and tap "Post to the group". The first time anyone writes, they are asked to agree to a short set of ground rules: write what you would say out loud,

what others write stays in the room, and there is a Report button and a way to block. That only happens once per person.

[Back on the leader phone: show the names appearing under the question with a lock icon.]

As host you see who has answered, by name, with a lock. Tap a name to open that answer to the room, or "Open all" to open every answer for that question at once. When you open it, you and the room see it at the same moment.

Prayer requests sit near the top of the room, under "Before you go". Everyone can add one and everyone sees them.

If someone signs in to answer a question for a guide they have already journaled on, the app offers their own journal entries as a starting point. It only fills their draft box. Nothing is ever posted for them.

If something goes wrong in the room

Every note has a Report button. If someone reports a note, it appears at the very top of your room under "Reported", visible only to you, with two choices: "Take it down" or "Leave it up". Anyone can also block another person, which means nothing that person writes reaches them.

[Pastoral note for leaders: the tools exist, but the expectation is that these are rare. If something needs follow-up beyond the room, handle it the way you would in person.]

Ending the night

At the bottom of the room is "Tonight, on one sheet". "Print everything to PDF" makes a single document: the guide, all the questions, what each person wrote and the prayer requests. "Send as text" shares it. Anything still locked is opened to the room first, so nobody is surprised by what is on the sheet. Many groups send the sheet round so people can pray through the week.

Anyone who wrote something can tap "Keep tonight in your journal" to keep their own answers and the prayer requests. Only their own answers, never anyone else's.

Then tap "Close the room". Members tap "Leave this room".

Room content is deleted ninety days after the room closes. The PDF and what people kept in their journals are the copies that last.

Things leaders should know

- Anyone can view a room with just the code, but writing needs an account, so names go on what people say.
- With poor signal, the questions and anything already opened stay on the phone, and anything written is sent when the phone reconnects.
- If the Group screen is missing from the menu entirely, the church has Group mode turned off for the season. Nothing is deleted when that happens.

- Whether rooms exist at all (Group mode) and who can open one (Leader mode) are two separate admin switches.

Part 6. For admins: the dashboard

Admins. About 20 minutes. Leaders are welcome to stay.

[Your account, then "Open the admin dashboard", or Admin in the menu. Show the menu: Manage Announcements, Manage users, App settings.]

Everything in here is live the moment you save it. That is the strength and the responsibility. There is nothing to deploy and nothing to wait for, so the right habit is to read it once before you tap save.

Manage Announcements: writing one

[Tap "Write an announcement". Fill in a sample, but do not post it, or untick "Published".]

An announcement has a title and a body, written in a proper editor with bold, italic, lists, links and a scripture button. It can also carry pictures, a YouTube video that plays inside the app, and a link with a thumbnail.

"Goes up" and "Comes down" are dates. Leave "Goes up" empty and it is on Home now. Set "Comes down" and the card takes itself off Home that day, so nobody has to remember. Please set an end date on almost everything.

Then three switches, and they matter:

- **Published.** Off saves it as a draft that nobody else sees.
- **Pin a banner.** Puts the title in a strip across the top of every screen until the announcement comes down. It is the loudest thing the app can do, so it is off unless you turn it on, and people can dismiss it on their phone.
- **Tell everybody.** Sends a push notification to every phone when you post. A notification cannot be unsent, so double-check the title first. Drafts, future-dated and expired announcements cannot be notified, on purpose.

Then "Post it", or "Save changes" when editing.

Manage Announcements: the newsletter queue

This is the part that will save the most time. A mailbox subscribed to our weekly email newsletter is read automatically every twenty minutes. Each item in it is typed up as a draft announcement and waits for an admin. Nothing from the newsletter ever goes live on its own.

When there is something waiting, admins get a notification: "Announcements waiting" or "Dates waiting". You can turn those off under Your account, Notifications. Only admins see those switches.

Drafts appear under "Needs review" with three buttons: "Approve" puts it up as written, "Edit" opens it in the form first, and "Discard" removes it from the queue. If it looks like an update to something already posted, the app says so and offers "Update it" or "Post separately". Usually "Update it" is right.

If a newsletter item has a date, the date waits separately under "Dates to review", because putting a date on everyone's calendar is its own decision. Approve it there, or "Merge" it with an event that already exists, or "Keep both".

"Fetch Announcements" checks the mailbox right now rather than waiting for the next twenty-minute run.

If several admins get the same notification, the first to approve settles it. The second person is told who already did it. Afterwards the card shows "Approved by" with the name, visible only to admins.

Manage Announcements: the posted list

Under "Posted" is everything live. The up and down arrows set the order on Home. Each one has "Edit", "Notify" to send a push later, and "Delete". Deleted announcements go to a Deleted list with "Restore", so a mis-tap is recoverable.

Admins and leaders see a small line on each announcement saying who posted it and when, or "from the email newsletter". Members never see that.

Manage Announcements: the home groups box

Further down is the box people see under Home groups on Connect. "Update from the latest announcement" rewrites it from our most recent home groups announcement, keeping every date and phone number, and puts the sign-up link on a button. At the end of a season, "Put it back to between seasons" restores the off-season wording. You can edit any of it afterwards, and "Put back what it said before" undoes the last update.

The calendar, from Cal itself

[Go to Cal. Show the "Add an event" button, the pencil and the x on an event.]

Admins edit the calendar directly on the Cal screen. "Add an event" adds one. The pencil on any event corrects its title, date, time, place or description. The x deletes it, after asking, and deleting is permanent. Anyone with "Get notified" set on that event has their reminder moved or cancelled automatically.

Manage users

[Open Manage users. Show the search box and the three folds.]

Everyone who has signed in is here, in three groups: Admins, Hosts and Members, with a search box at the top. On each person:

- **Leader mode:** the switch that makes someone a leader or host. This is the one you will use most. Turn it on for every group leader before the 25th.
- **Make an admin** or **Make a member:** changes their tier.
- **Remove:** deletes the account entirely.

Two safety rails: you cannot change your own role and you cannot remove your own account from this screen. That way the last admin can never lock everyone out.

[Suggest the church keeps at least two admins at all times.]

App settings

App settings holds the switches that change the app for everybody. From the top:

- **Maintenance mode.** For emergencies. On covers the whole app for everyone except admins with "We'll be back soon." within about a minute. Nothing is deleted. It stays up until an admin turns it off.
- **Edit mode.** Turns the app into something you can type into. More on this next.
- **Group mode.** Adds or removes the Group screen for the whole church. On during group seasons, off between them. Every room and answer stays put when it is off.
- **Pinned banner.** One line at the very top of Home, for things that cannot wait for an announcement. "Edit", type the line, "Save". "Notify everyone" sends it as a push when you save, and turns the banner on if it is off. It always starts switched off.
- **Featured video.** Paste any YouTube link and it becomes the video under the greeting on Home. Empty the box to take it off.

On the Announcements screen there is also a "Writing one" switch: whether "Tell everybody" starts on or off when you write a new announcement.

Edit mode: fixing words in place

[Turn Edit mode on. Go to Give or Connect and show the pencil outlines. Edit a line, then "Reset to original" to undo.]

With Edit mode on, every sentence the church is allowed to change gets an outline and a pencil. Tap it, change the words, "Save". It is live for everybody on their next refresh. "Reset to original" puts back the words the app shipped with.

What you can edit: descriptions, captions, notes under buttons, button wording, serve team and group descriptions, event descriptions, a guide's subtitle, and the like. What you cannot: screen titles and headings, the names of things, dates and times, addresses, links, the guide's main text and questions, and anything people wrote themselves. Those are changed elsewhere, deliberately.

Edit mode is only on for your phone, and it switches itself off when you close the app or after thirty minutes untouched. A pill above the bottom of the screen shows it is on, and tapping it is the fastest way out.

Part 7. Where the weekly content comes from

Everyone. About 3 minutes.

People will ask how the guide appears every week. Here is the rhythm:

- **Sunday to Monday:** the sermon becomes the group guide and is published, along with Sunday's worship setlist.
- **Monday or Tuesday:** the podcast episode posts, gets attached to its sermon, and the real sermon title replaces the working title everywhere.
- **All week:** announcements from the newsletter queue and anything admins post, plus calendar updates.

The guide, podcast, setlist, series artwork and featured video are published by the content team using tools outside the app. Admins do not need to do anything in the app for those to appear. If something in a guide is wrong, tell the content team rather than trying to fix it in Edit mode. Guide text and questions are deliberately not editable there, because a group room copies the questions when it opens.

[Name the person on the content team that staff should contact. Fill in: _____]

Part 8. What to tell people about privacy

Everyone. About 3 minutes.

Somebody will ask "who can see what I write?". Here are the honest answers.

- **Journal and highlights:** only you. If you are signed in, it is backed up to your account so it follows you to a new phone. No leader or admin has any screen that shows it.
- **Group room answers:** the people in that room, once the host opens them. Rooms are deleted ninety days after they close.
- **Reminders, archived announcements, display settings:** on your phone only.
- **Your account:** your email and name. Admins can see the list of who has signed in, with names and emails, in order to assign roles.
- **No tracking:** no ads, no analytics, no third-party trackers.
- **Leaving:** anyone can delete their account and data themselves from Your account, Your data.

Please do not promise more than that. In particular, do not tell people their journal is "encrypted so not even the church could read it". It is private by design, and nobody at the church has a way to view it in the app, but that specific claim is not one we make.

Part 9. Before the 25th: what we need from you

Everyone. About 3 minutes.

Everyone

- Install the app and sign in with the email address you want attached to your role.
- If the code lands in junk, mark it "Not junk".
- Allow notifications when asked.
- Spend ten minutes in this week's guide: highlight a line, write a journal note, tap a scripture reference.

Leaders and hosts

- Tell an admin once you have signed in, so they can turn on Leader mode for you.
- Check that "Start presentation mode" appears at the top of a guide.
- Practise a room with one other person: open it, join, post, open an answer, print the sheet, close it.

Admins

- Turn on Leader mode for every leader and host once they have signed in.
- Make sure there are at least two admins.
- Decide who watches the newsletter queue each week, and keep "Announcements waiting" and "Dates waiting" notifications on for that person.
- Decide the Group mode setting for launch.
- Agree as a team on when "Tell everybody" and the pinned banner are used, so people do not get notification fatigue in the first month.
- Know where Maintenance mode is. You will hopefully never need it.

Part 10. Questions you will probably get

Q and A.

"I never got my sign-in code."

Check junk or spam and mark it "Not junk". Make sure the address is typed right. Ask for a new code if it has been a while.

"I am a leader but I do not see the leader tools."

An admin needs to turn on Leader mode for your account under Manage users. Then close and reopen the app.

"Where did the Group screen go?"

Group mode is off for the season. Nothing is lost; it comes back exactly as it was.

"I do not see the announcement everyone is talking about."

Pull down from the top of the screen to refresh. If they archived it, it is in "Announcement Archive" under the last card on Home.

"Can my group leader read my journal?"

No. Nobody else can see it. Only what you post in a room is shared, and only once the host opens it.

"Why does the sermon say (Working Title)?"

The guide is written before the episode posts. The real title replaces it when the episode goes up, usually Monday or Tuesday.

"Can I give through the app?"

The Give button opens Overflow in your browser. There is no payment inside the app.

"How do I stop getting so many notifications?"

Your account, Notifications. Each kind has its own switch.

"I posted an announcement with a typo."

Admin, Manage Announcements, Edit, fix it, Save changes. If a notification already went out, it cannot be recalled, so it is not worth sending a second one for a typo.

"The text is too small."

Your account, Display, Text size. There is also Dark mode there.

"Does it work without signal?"

Yes, for anything already loaded: guides, questions, verses already opened, your journal. New content arrives when the phone reconnects.

"How do I delete my account?"

Your account, then Your data. Everything is removed, and it cannot be undone.

Appendix A. Who can do what, at a glance

Member (everyone, signed in or not)

- Read guides, highlight, take notes, download a guide as a PDF.
- Listen, browse the calendar, add events to calendar, set event reminders.
- Connect: contact form, groups, serve teams, next steps.
- Journal, Worship, Services, Practices, Alpha, Give, search.
- Join a group room with a code. Writing in a room needs to be signed in.

Leader or host (Leader mode on, set by an admin)

- Everything a member can do.
- Presentation mode in every guide.
- Open, host and close group rooms: edit and add questions, open answers, handle reports, print and text the night sheet.
- See who posted each announcement.

Admin

- Everything a leader can do.
- Manage Announcements: write, edit, order, notify, pin, delete and restore; approve the newsletter queue; update the home groups box.
- Add, edit and delete calendar events from the Cal screen.
- Manage users: Leader mode, admin or member, remove.
- App settings: Maintenance mode, Edit mode, Group mode, pinned banner, featured video.
- Admin-only notifications for the newsletter queues.

Appendix B. Presenter checklist for the day of the walkthrough

- Two phones: one signed in as an admin (for screen mirroring), one signed in as a member.
- Confirm screen mirroring works in the room, and that both phones have signal or Wi-Fi.
- Pull to refresh on both phones just before you start.
- Group mode on, so the Group screen is in the menu for Part 5. Decide whether to leave it on afterwards.
- A current guide is published, so "Host tonight" has something to open.
- Leave anything you create during the demo unpublished. Do not tap "Tell everybody" or "Notify everyone" during the demo: those reach every phone.
- Delete the demo room content afterwards by closing the room.
- Turn Edit mode off when you are done, and reset any sentence you changed in the demo.
- Fill in the content team contact in Part 7.
- Have the list of leaders and hosts ready so admins can turn on Leader mode during or right after the session.
